

Create the resources your students deserve in minutes, not hours

What is Create ?

When you create a resource in SmartEducator, you're not just generating a list of questions. Every assignment comes complete with everything you'd otherwise have to build from scratch:

A student-facing question paper, formatted to your preferences and ready to use

A candidate cover sheet, so students have everything they need on one page

A rubric or answer key, generated alongside the assignment and always kept separate from student view

High and low-quality model answers, ideal for class review and helping students understand what good looks like

Taxonomy tags on every question, so you always know the cognitive level you're targeting

How Create Works

From idea to resource in six simple steps:

1. Select your class

Every resource starts with context, and SmartEducator stores it so you don't have to re-enter it every time. Selecting a class automatically pulls in grade level, subject, standards alignment and any learning needs or accessibility requirements already saved to that profile, so what's generated is calibrated to the students receiving it.

Prefer to build first and assign later? You can create a resource without a class too, ideal for building a bank of materials or working with individual students.

2. Choose your resource type

SmartEducator supports a wide range of resource types – including essays, quizzes, multiple choice papers, short answer tasks, extended writing exercises and more – each with sensible presets so you're never starting from scratch on settings.

Your top three most used are pinned at the top of the Create screen for quick access and you can customize these shortcuts or save your own resource types to match your department or teaching style.

How Create Works

3. Describe your topic and refine with AI

Type in what you're teaching – as broadly or specifically as you like – then click Refine Topic. SmartEducator generates four distinct directions for you to choose from, calibrated to different challenge levels:

SPARK

A creative, engaging angle to capture student interest

FOUNDATION

Core knowledge that's accessible and standards-aligned

STRETCH

Assumes prior knowledge that's accessible and standards-aligned

MASTERY

Extended, advanced work for your highest-attaining students

4. Add the extra details

Want more control than the defaults offer? Fine-tune exactly how you want your assignment to be built.

- Number of questions and points awarded per question
- Time allocation for the assignment
- Question formats – multiple choice, short answer, extended answer or a mix
- Images, diagrams or mathematical equations
- Sub-questions and optional questions
- Cognitive complexity, mapped to your preferred taxonomy (Bloom's, SOLO or Depth of Knowledge)

Or if you prefer, skip this step entirely and let the defaults do the work. Everything is editable after resource generation if something doesn't look or feel right.

5. Generate and review

Hit generate and your complete resource is ready in minutes, not hours: question paper, rubric, taxonomy tags. All in front of you and all editable:

- Rewrite any question directly in the platform
- Adjust point allocations without rebuilding the rubric
- Reorder questions by dragging and dropping
- Add, remove or split questions as needed
- Edit rubric points to reflect your own expectations or standards guidance

The contextual chat assistant is on hand throughout. Ask it to rewrite a question in a different style, adjust the difficulty of a section, or add a question on a specific topic – in plain language, without leaving the page.

6. Ready to use

When you're happy, you have two options :

Publish to your class – SmartEducator pushes the assignment straight to your connected LMS (Google Classroom, Canvas, Microsoft Teams and more), so students see it immediately through the platform they already use.

OR

Download for print – Export a print-ready PDF of the resource you created, cleanly formatted and ready for the classroom or a one-to-one session.

Every version is saved in your Resource Library, ready to reuse, adapt or share whenever you need it.

The Details We Think You'll Love

Set the context for everything you create

Behind every generated resource is SmartEducator's context engine – a layer of class and student information that shapes everything the platform produces, from question complexity to feedback tone.

You can build context at three levels:

CLASS

Set default feedback style, grading rigor, standards alignment and any class-wide accessibility or learning needs, applied automatically every time you create or grade for that class.

STUDENT

Add individual context like learning preferences, additional needs and performance history, factored in whenever SmartEducator generates or grades work for that student.

ASSIGNMENT

Override class or student context for a one-off, such as a stretch task for the whole class or a catch-up assignment for anyone who missed a topic.

**The result isn't generic, randomized content.
It's content that's right for your class, your students and your curriculum every time.**

Everything you've made, ready when you need it

Share resources with colleagues or keep them private to your own account. Every resource you create or upload is stored automatically in your Resource Library:

- Search by subject, class, resource type or date
- View as cards or as a table
- Filter by class, or browse everything at once

Also, if you've found a format or configuration that works for you or your students, you can save it as a custom resource type to reuse with just one click!

Save it as a custom resource type and reuse it with one click.

It's another small way SmartEducator saves you time and cuts out repeated work.

SmartEducator does the groundwork. You get the final say.
